

NEC CORP  
Inventor(s):KUBOTA HIROYUKI  
Application No. 11119662 JP Filed 19990427, Published 20001107

**Abstract: PROBLEM TO BE SOLVED:** To improve operability in the case of deleting, moving or copying data prepared by a certain user by integrally managing data, which are prepared by groupware and various applications operated on a groupware system, for the unit of a user in spite of preparation source.

**SOLUTION:** A resource managing part 12 manages data, which are prepared by the groupware and application programs operated on the groupware system, for each user. When a processing request instructing the deletion, movement or copy of data of a certain user is inputted, a resource operation processing request part 30 acquires the identification information of the resource managing part required to be operated for processing the processing request from a directory server 20 and a resource management control part 40 outputs a processing request corresponding to the contents of the processing request to the resource managing part shown by the identification information.

Inventor(s):SOMEYA HARUYUKI;KEDA KAZUYUKI;TASHIRO TSUTOMU;SHIMIZU TAKATOSHI  
Application No. 05091060 JP05091060 JP, Filed 19930419.

Abstract: PURPOSE: To provide an assistance system which centralizes operation control over the system by concentrating and integrating an existent operation control tool group on one terminal device and making the existent operation control tool group function by an integrated interface which removes a difference in operating method.

CONSTITUTION: A computer 1010 which has a multiwindow applied terminal device 1020 is coupled with a system 1100 to be controlled by a communication means 1200. Further, this computer 1010 is equipped with an emulation means which simulates the operation of a terminal device 1120 on which respective operation control tools 1110 operate through software, a means which concentrates and processes message groups outputted by the respective operation control tools 1112, a means which controls a display of the concentrated and processed information on a multiwindow screen, a means which interprets and converts operation from the multiwindow applied terminal device 1020 into command groups to the respective operation control tools 1112, and a means which generates the screen interface of the multiwindow applied terminal device 1020 associatively with existent OA tools; and the functions of plural operation control tool groups are integrated and concentrated into one window.
